

GRACY SINGH

+91 8595795022 | gracysingh0601@gmail.com | github.com/GracySingh2003

Education

Netaji Subhas University of Technology
B.Tech (ECE + AI/ML)

2021–2025
CGPA: 7.53/10

Technical Skills

- Languages & Query:** Python, SQL
- Data Analysis:** Pandas, NumPy, EDA, Data Cleaning & Wrangling, Statistical Analysis, Feature Engineering
- Visualization & BI:** Power BI (DAX, Power Query), Excel (Pivot Tables, Power Query, XLOOKUP, INDEX-MATCH, Conditional Formatting)
- Database & Modeling:** MySQL, PostgreSQL, Relational Schema Design, CRUD Operations, CTAs, Joins & Subqueries, Window Functions
- Tools:** Jupyter Notebook, Git, GitHub, VS Code

Professional Experience

WorldQuant Brain — Research Consultant (Remote)

May – July 2025

- Built and simulated **100+ quantitative trading alphas** on WorldQuant's Brain platform using price/volume and cross-sectional data operators (rank, delay, ts_mean) across US equity markets.
- Submitted **10+ alphas** through full simulation pipeline (Sharpe, Fitness, Turnover, Drawdown checks), iterating on signal logic to improve performance metrics and reduce correlation with existing alpha universe.

Data Analytics ETL Intern — TechnoData Analytics

August – October 2025

- Built **ETL pipelines** on superstore transactional data using Pandas — cleaned, transformed, and validated raw records for downstream business reporting.
- Developed **Power BI dashboards** monitoring sales and inventory KPIs; standardized datasets to streamline recurring reporting cycles.

Personal Projects

Customer Shopping Behavior Analysis | [GitHub](#) | SQL · Python · Power BI · Pandas

- Analyzed **3,900+ customer records** using **advanced SQL queries** (CTEs, Window Functions, conditional aggregation) and Python EDA — segmented customers into New/Returning/Loyal cohorts and identified top-3 products per category.
- Found that **repeat customers** were using discounts more frequently than other customer groups, highlighting an opportunity to optimize promotional strategies. Presented findings through a **Power BI dashboard** and business recommendations.

Library Management System | [GitHub](#) | SQL · MySQL

- Designed and implemented **relational database system** to manage books, members, employees with lending activities. Applied database normalization principles and established relationships using **primary** and **foreign keys** to ensure data integrity.
- Developed **SQL queries** to track book issuance, returns, overdue records, and branch-level operations, and **generated reports** that provided insights into library performance and resource utilization.

Walmart Sales Analysis | [GitHub](#) | SQL · MySQL · Python · Pandas

- Analyzed **10,000+ Walmart transactions** across multiple branches using SQL to understand customer purchasing patterns, sales performance, and category-level trends.
- Used **CTEs** and **Window Functions** to identify the highest-rated product category, busiest day, and preferred payment method for each branch, helping uncover branch-specific performance insights.
- Assessed category-wise profitability and branch performance, identifying the **top 5 branches** with declining year-over-year revenue and highlighting peak sales periods to support operational and sales planning.

Achievements & Certifications

- HackerRank **SQL Gold Badge** — top-tier SQL proficiency credential awarded to top performers on HackerRank.
- Deloitte Australia Data Analytics Job Simulation — Forage (*forensic data analysis, data interpretation, dashboard creation*)
- Power BI, SQL & Python Certifications — SkillCourse
